

Rice Lake Diffuser Aeration System

February 2019

Objective: The Rice Lake Area Association (RLAA) is contemplating replacing the existing above surface aspirator aeration system with an underwater diffuser system (similar to the one now used at Lake Edward in Maple Grove). This change in aeration configuration would require the installation of a cement slab approximately 3' x 3' between the shoreline and the park path on City property. The existing power meter and panel would remain in place and be used to support the new system.

Request: Can the City of Maple Grove allow RLAA to install this cement slab between the park path and shoreline located at approximately 15573 91st Avenue North?

See below for photos of the existing system and maps of the area.

Thank you,
George Schneider
Secretary/RLAA
